

Net'Eau® F30 Ionizer

Solar-powered - Floats on the water.

The Swimming pool ionizer **Net'Eau® F30** is an original portable water purifier that floats on water. Its unique combination of solar-generated electrical energy and ionization makes it the only solar-powered ionizer available on the market.

Helps suppress 80% to 100% of the chlorine in your pool.

The **Net'Eau® F30** ionizer treats up to 30 m³ water volumes (about 39.2 yrd³). (it is perfect for use in swimming pools, fountains, spas, basins...)

You'll never experience again irritated eyes, dry skin, discoloured dry hair, chemical smells or chlorine-related bleaching.

This eco-friendly device helps to promote a healthy environment free from chemical products. Unlike chlorine, which loses its efficiency after only a few hours, the mineral ions produced by the **Net'Eau® F30** ionizer remain efficient for weeks!

How does it work ?

As the device floats on the water, solar light is transformed into electricity by its high-tech photo-voltaic panel. This innocuous, low-voltage current activates a mineral electrode below the waterline, allowing copper and silver ions to spread into the nearby water.

As a result, unwanted micro organisms, such as bacteria and algae are eliminated.

2-year guarantee
Height : 8" (about 20,3 cm diameter)
Weight : about 750g
Average life of the copper-silver electrode is 3 seasons.

The Net'Eau® Ionizers are designed and assembled in our workshops according to a technology developed by Euromed Distribution.
